

EVERYTHING TO EVERYBODY

The indii thesis.

Why independent artists do not need one more isolated tool. They need the work around the music to understand the work beside it.

WIIL, FOUNDER / DETROIT / 2026

EPISODE I / THE ARGUMENT

The conventional advice breaks here.

The conventional startup playbook says: build for somebody, not everybody. You cannot be everything to everyone.

That is true in most industries. But an independent artist does not need one thing. They need every part of a working music business at once.

indii is the infrastructure without the surrender.

EPISODE II / WHAT INDII IS

One workspace. Artist controlled.

indii is the conductor and the orchestra.

indii is an operating workspace for independent music artists. Not a recording program. Not a streaming service. It is where the work around a music career can live together.

Distribution, audio, creative direction, rights, finance, publishing, licensing, campaigns, publicity, touring, merchandise, security, and the project record work from the same artist-controlled context.

The artist remains the owner, the decision-maker, and the source of truth.

EPISODE III / THE OPERATING ADVANTAGE

Context moves with the work.

Most music-business tools solve one isolated task. The artist is left carrying information from one system to the next and repairing the gaps by hand.

indii starts with shared project context. When rights information changes, the release record can reflect it. When the route changes, the working budget and show record can move with it.

Files, notes, voice memos, receipts, locations, assets, and approvals become part of the same working record. The next move begins with context instead of another blank form.

EPISODE IV / THE YAGNI PHILOSOPHY

Build the spine. Reuse the truth.

You Aren't Gonna Need It - until you do. indii is built around reusable operating capabilities: projects, files, records, approvals, plans, and the connections between them.

A release does not need a special version of your ownership data. A tour does not need a separate version of your artist identity. The same reliable source should serve every part of the work.

That is how the product can grow without asking the artist to rebuild their career inside every new feature.

EPISODE V / THE COMPETITIVE MOAT

The artist stops starting over.

The music industry is full of useful single-purpose tools. The problem begins when none of them understand what happened in the tool beside them. The artist becomes the integration layer.

indii is designed so approved visual direction can inform the campaign, the route can inform the working budget, and the rights record can stay attached to the release it governs.

The advantage is not one more feature. It is the end of starting over.

EPISODE VI / THE ARTIST KEEPS THE LEVERAGE

Infrastructure, not ownership.

A system cannot write the song, guarantee an audience, or manufacture a career. It can remove the administrative drag that keeps talent from getting a fair chance to move.

The bedroom producer in Detroit should not need a label-sized staff before they can organize a release, understand the business, and protect the work.

Give the artist the infrastructure. Keep the ownership with the artist.

THE FOUNDER EDITION

Build your career without giving it away.

One workspace for the work behind the music. The artist owns the work, directs the decisions, and keeps the leverage.

YOU need indii.music.
